WESLEY HARDING

DATA ENGINEER / APPLIED ANALYTICS

TARGET

QUALITY ENGINEER INTERN — RELATIVITY SPACE

I build **end-to-end data systems** — ingestion, validation, scoring, and analytics — and ship them to production. My flagship platform, **earth00**, runs a live ETL pipeline pulling from **16+ source types** into PostgreSQL, then ranks, classifies, and visualizes the results on an interactive 3D globe. It maps directly to a quality-driven environment: **reliable pipelines, automated data-quality checks, root-cause debugging, and scalable analytics** — built to be verified, not just shipped.

REPO WESLEYHARDING3/EARTH1000

A full-stack **global news aggregation & analytics platform**. Articles flow through a live ETL pipeline into PostgreSQL, get scored, classified, and geo-routed, then surface on an interactive **3D globe** with a news feed and trend statistics.

01 SIGNAL CHAIN — DATA PIPELINE

02 WHAT SETS THE WORK APART

01

// PIPELINE

RELIABLE ETL AT SCALE

End-to-end pipeline ingesting articles from **16+ source types** into PostgreSQL on Render — enabling consistent **data-quality checks** and scalable analytics.

02

// SERVICES

SQL + NODE BACKEND

SQL queries and Node.js services for **article ranking**, **keyword analytics**, **geographic routing**, and image-location enrichment across global regions.

03

// MODELING

SCORING & CLASSIFICATION

A statistical **article-scoring and classification system** auto-tagging by relevance, location, and freshness — driving a continuously-tuned ranking engine.

03 QUALITY-ENGINEERING SIGNAL

VALIDATE

Automated source checks

A **sourceTester** harness auto-detects source type before ingestion — catching bad feeds upstream of the database.

RESUME

Checkpointed jobs

Large backfills (~266K articles) persist progress to the DB, so reruns are safe and idempotent — reliability under failure.

DEBUG

Root-cause fix

Traced and fixed a defect where tag-filtered feeds bypassed the ranking pipeline via raw SQL — restoring correct, verifiable output.

TUNE

Iterative process

Versioned scoring weights, diversity cooldowns, and multilingual stopword cleanup across ~57 languages to keep data integrity high.

WH

S/01 SKILLS → REQUIREMENTS

Python	Scrapers, classification, channel-ID resolution, keyword translation jobs
SQL	Ranking queries, trending/rising keyword endpoints, schema & migrations
PostgreSQL	Production DB on Render — ~266K articles, indexing, checkpoints
ETL	End-to-end ingest from 16+ source types with validation & backfill
Web Scraping	RSS fallback tiers + Playwright image / content scrapers
Node.js / JS	Express API — scoring, priority & ranking services, geo routing
Data Viz	Three.js 3D globe, news feed, trend & statistics views
AWS	Cloud Practitioner certified; cloud-hosted deploys (Render / GCS)
Git	Version-controlled solo development across the full earth00 stack

S/02 EARTH00 SUBSYSTEMS

- | | |
|-----------------------|---------------------------|
| ▸ scoringEngine.js | ▸ imageResolver.js |
| ▸ priorityEngine.js | ▸ locationRouter.js |
| ▸ rankingService.js | ▸ translateKeywords.js |
| ▸ sourceTester.js | ▸ enrichImageLocations.js |
| ▸ backfillClassify.js | ▸ rerouteAll.js |

S/03 EXPERIENCE LOG

- **8+ Years — Operations & Data Analytics**
Restaurant & entertainment management across Los Angeles, Portland & San Diego. Hands-on with **SQL, Excel, and BI tooling** for reporting and operational decisions.
- **Independent Engineering — earth00**
Solo-built and deployed a production full-stack data platform: ETL, PostgreSQL, ranking/scoring services, multilingual analytics, and a 3D-globe front end.

C/03 ENGINEERING TRAITS

- Builds for **verifiability**, not just output
- Prefers **targeted fixes** over rewrites
- Communicates **concisely** & precisely
- Self-directed; **ships to production**

// FIT — QUALITY ENGINEERING

Quality engineering is about ensuring systems behave correctly and reliably at scale. I already work that way — **validating inputs, persisting checkpoints, debugging to root cause, and tuning measurable outputs** — and I'd bring that discipline, plus a strong data and cloud foundation, to Relativity Space.
